LANGUAGES

Czech, English

SKILLS

C# (Unity, WinForms, ASP.NET, Entity Framework, Blazor), Java (Spigot plugins, Maven), C++ (UE 5)

Unreal Engine 5, Unity, Spigot

Rider, IntelliJ Idea, Visual Studio, Git

Blender, Illustrator, Paint.net, Affinity

Game design

Adobe Premiere Pro, DaVinci Resolve, MS office

ABOUT ME

I'm a game developer with a strong interest in level design, gameplay systems, and creating immersive game worlds. Through my work on MineHub.cz, I've gained hands-on experience designing gameplay features, building environments, and developing a large-scale multiplayer gaming experience. Alongside this, I've developed several independent game projects, ranging from an open-world survival game in Unreal Engine 5 to a 2D colony simulation game built using my own custom engine. I'm passionate about creating engaging player experiences and combining creative design with technical problem-solving.

EDUCATION HISTORY

Střední škola a vyšší odborná škola aplikované kybernetiky s.r.o. (2020-2024)

Specialized in programming and electrical engineering with a personal focus on game development.
Gained hands-on experience through regular project days and game dev subjects.
Worked with C# and .NET technologies including WinForms, ASP.NET, Entity Framework, and Blazor.

WORK EXPERIENCE

MineHub.cz - Game Systems, Minecrat Plugin Developer (Self-employed, June 2024 - present)

- Developed and maintained custom gameplay systems and plugins for a large-scale multiplayer Minecraft server.
- Contributed to a major server rework, modernizing existing systems, improving performance, and expanding gameplay features.
- Designed and implemented gameplay mechanics for multiple game modes, including Survivors, a Rust-inspired survival experience.
- Created custom builds and environments, combining visual design with gameplay functionality.
- Collaborated with other developers, participated in technical planning, and mentored junior Java developers.

PROJECTS (MORE ON MY PORTFOLIO)

Attheria

Attheria is an open-world survival game developed in Unreal Engine 5.5, featuring deep base-building mechanics and strategic PvP raiding. The project leverages a hybrid approach of Blueprints and C++, ensuring optimized gameplay systems and seamless multiplayer integration via Steamworks. I am solely responsible for all game assets, including 3D models, textures, animations, and UI, utilizing Blender, Substance Painter and Designer.

Colony RimWorld like game

An early-stage 2D colony simulation game inspired by RimWorld, developed using my own custom game engine.
